HASNA HASAN

Full-Stack Developer (MERN Stack)

+91 9207478990 hasnahasnahasan194@gmail.com LinkedIn GitHub

Kerala, India

PROFESSIONAL SUMMARY

Full-Stack Developer with hands-on experience building scalable, high-performance web applications using the **MERN stack (MongoDB, Express.js, React, Node.js)**. Proficient in **JavaScript, TypeScript, SQL, HTML, and CSS** with a strong understanding of **RESTful APIs, authentication systems, and cloud deployments**. Known for clean, maintainable code and translating complex requirements into efficient, business-oriented solutions. Passionate about code optimization and contributing to collaborative, growth-focused engineering teams.

TECHNICAL SKILLS

Languages	**JavaScript, TypeScript, SQL, HTML, CSS**
Backend	**Node.js, Express.js, Socket.IO, RESTful API Development,NestJS, Data Structures**
Frontend	**React.js, Tailwind CSS, Bootstrap, Redux, Tanstack Query**
Databases	**PostgreSQL, MySQL, MongoDB, Redis**
DevOps / Tools	**Git,GitHub, Docker, Nginx, AWS EC2, Postman, Figma , CI/CD, Vercel, Render**
Integrations	**JWT, OAuth, Payment Gateways, Email Services, WebSockets**
Concepts	**MVC Architecture, Clean Architecture, SOLID Principles, Third-Party Integrations**

PROFESSIONAL PROJECTS

CareVoyage — Travel Booking & Multi-Role Service Platform Live Demo — GitHub

Tech Stack: TypeScript, Node.js, Express, MongoDB, Redis, Socket.IO, Stripe, Docker, AWS EC2

- Architected a scalable backend using **Clean Architecture** and **SOLID principles** across 15+ API modules
- Implemented multi-role authentication (User, Caretaker, Agency, Admin) using **JWT, Google OAuth, and OTP** flows with Redis
- Built a service marketplace enabling users to connect with caretakers and agencies for booking travel-related services
- Designed an end-to-end booking workflow with real-time status tracking, cart, wishlist, and order management
- Integrated **Stripe** payments and wallet system supporting advance payments, secure transactions, and refunds
- Enabled real-time communication between users and caretakers using **Socket.IO**
- Created admin and agency modules for user/caretaker management, trip management, order tracking, and analytics
- Generated sales and booking reports with filtering and **PDF/Excel export** functionality
- Deployed containerized services using **Docker on AWS EC2** with Nginx as reverse proxy and GitHub Actions **CI/CD for automated releases**

ReadHaven — Full-Stack E-Commerce Platform for Books Live Demo — GitHub

Tech Stack: React.js, Node.js, Express.js, MongoDB, Razorpay, JWT, Google OAuth, AWS EC2, Vercel, MVC

- Built product browsing with category-based filtering, cart, wishlist, and order management
- Integrated **JWT and Google OAuth** for secure user authentication
- Developed coupon management system with validation and discount logic
- Integrated **Razorpay** payment gateway with wallet and refund workflows
- Generated automated **PDF and Excel** sales reports for admin analytics
- Deployed backend on **AWS EC2 with Nginx** and frontend on Vercel; followed MVC architecture

ADDITIONAL PROJECTS

Flavor Forge — Interactive Recipe Application Live Demo — GitHub

Tech Stack: Node.js, Express.js, React.js, PostgreSQL, REST API

- Developed a full-stack recipe application enabling users to search, view, and save recipes
- Integrated the **Spoonacular API** to fetch recipe data, including ingredients, instructions, and nutritional information
- Implemented secure user authentication and authorization using **token-based authentication**
- Designed responsive and user-friendly interfaces for recipe search, filtering, and favorites management
- Built **RESTful APIs** for recipe retrieval and user preference management
- Implemented error handling, loading states, and database persistence for saved recipes
- Followed **MVC architecture** and industry best practices for maintainable code

ZapLink — Authenticated URL Shortener Live Demo — GitHub

Tech Stack: NestJS, Node.js, React.js, JWT Authentication

- Developed a secure URL shortening platform using **NestJS** and modern frontend technologies
- Implemented user registration, login, and **JWT-based authentication** for protected routes
- Designed APIs for generating and managing shortened URLs accessible only to authenticated users
- Applied password hashing and validation mechanisms to enhance application security

- Built responsive frontend interfaces for authentication and URL management workflows
- Structured the application using **NestJS architecture principles** and modular design patterns
- Implemented robust input validation, error handling, and token management

EDUCATION & TRAINING

MERN Stack Development — **Brototype, Kochi**
Full-stack web development training — **2024 – Present**

B.Sc. Zoology — **University of Calicut, Kerala**
Bachelor of Science — **2021 – 2024**

KEY ACHIEVEMENTS

- Designed and developed scalable full-stack applications using the **MERN stack with TypeScript**
- Architected a multi-role travel platform (User, Agency, Caretaker, Admin) following **Clean Architecture** and **SOLID principles**
- Implemented secure authentication flows including **JWT, OAuth, and OTP-based** signup using Redis
- Built real-time features such as group chat and booking status updates using **WebSockets (Socket.IO)**
- Integrated **payment gateways, wallet systems, and refund workflows** for production-ready applications
- Deployed applications using **Docker on AWS EC2** with environment-based configurations
